Art Unit: 2822

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-48, drawn to a semiconductor device, classified in class 257, subclass 315.
- II. Claims 49-68, drawn to a process for making a semiconductor device, classified in class 438, subclass 287.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (M.P.E.P. § 806.05(f)). In the instant case unpatentability of the group I invention would not necessarily imply unpatentability of the group II invention, since the device of the group I invention could be made by processes materially different than those of the group II invention. For example, the source and drain regions may be formed prior to formation of the gate and the same structure would result.

Because these inventions are distinct for the reasons given above and, as shown by the above different classifications, the fields of search are not co-extensive and separate examination would be required, restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed.
